

DSA-101 PYQs

1. Discuss the applications of recursion, backtracking.
2. Solve a problem related to greedy, divide & conquer, dynamic programming.
3. Write a program to demonstrate trees, binary trees, bst.
4. Give real-life examples where sorting & searching algorithms is applied.
5. Discuss the applications of sorting & searching algorithms.
6. Explain the concept of recursion, backtracking with examples.
7. Write a program to demonstrate arrays, strings.
8. Explain the concept of sorting & searching algorithms with examples.
9. Give real-life examples where heaps, hashing, graphs (dfs/bfs) is applied.
10. What are the key differences in heaps, hashing, graphs (dfs/bfs) methods?
11. Solve a problem related to arrays, strings.
12. What are the key differences in trees, binary trees, bst methods?
13. What are the key differences in arrays, strings methods?
14. Give real-life examples where sorting & searching algorithms is applied.
15. Describe challenges or limitations of recursion, backtracking.
16. Write a program to demonstrate trees, binary trees, bst.
