

Maths PYQs

1. Describe challenges or limitations of probability & statistics.
2. Describe challenges or limitations of calculus basics.
3. Discuss the applications of set theory, logic.
4. Describe challenges or limitations of set theory, logic.
5. Describe challenges or limitations of probability & statistics.
6. Give real-life examples where graph theory & combinatorics is applied.
7. Describe challenges or limitations of graph theory & combinatorics.
8. Give real-life examples where functions, relations is applied.
9. Explain the concept of number theory (for cryptography & hashing) with examples.
10. Give real-life examples where functions, relations is applied.
11. Give real-life examples where graph theory & combinatorics is applied.
12. What are the key differences in graph theory & combinatorics methods?
13. Describe challenges or limitations of functions, relations.
14. Describe challenges or limitations of number theory (for cryptography & hashing).
15. Give real-life examples where discrete mathematics is applied.
16. Write a program to demonstrate functions, relations.
